模态框:

<h3>创建模态框</h3>

```html
<button class="btn btn-primary" data-toggle="modal" data-target="#pop-window"
    data-backdrop="static">

    弹出模态框

</button>

<div class="modal fade" id="pop-window">
    <div class="modal-dialog">
        <div class="modal-content">
            <div class="modal-header">
                <button class="close" data-dismiss="modal">
                    &times;
                </button>

                <div class="modal-title">模态提示框</div>

            </div>
            <div class="modal-body">

                成功提示

                成功提示

                成功提示

            </div>
            <div class="modal-footer">
                <button class="btn btn-default" data-dismiss="modal">

                    关闭

                </button>
                <button class="btn btn-primary">

                    确定

                </button>
            </div>
        </div>
    </div>
</div>
```

Javascript 方式触发:

```
$(function(){
        $("#btn").on("click", function(){
            $("#pop-window").modal("show");
        });
        $("#btn2").on("click", function(){
            $("#pop-window").modal("show");
        });

        //自动加载

        $("#pop-window").modal();
    });
```

```
<h3>创建模态框</h3>
    <button class="btn btn-primary" id="btn" >

        弹出模态框

    </button>
    <a href="javascript:;" class="btn-link btn-primary" id="btn2">

        链接弹出模态框

    </a>

    <div class="modal fade" id="pop-window">
        <div class="modal-dialog">
            <div class="modal-content">
                <div class="modal-header">
                    <button class="close" data-dismiss="modal">
                        &times;
                    </button>
